New Google app that lets you write freely

Google has designed an app to test users' onscreen penmanship. Known as Google Handwriting Input, it allows them to write on a smartphone or tablet screen. The app automatically interprets letters from 82 different languages and transforms these into standard digital text. Users can use their fingers as well to write. This app can identify both cursive and print handwriting, and also accepts emojis.

Samsung's DOWELL for the disabled

This new app from Samsung allows users with upper-limbs disabilities to control their smartphones with existing assistive-computer devices. Once a user installs DOWELL and connects his or her smartphone to a USB-type computer-assistive device, he or she can utilise the upper and lower sections of the smartphone screen as DOWELL's user interface (UI). On the upper screen, the user can tap or drag, among other touch commands. On the lower screen, he or she can access the menu, home screen, back function and other basic hardware keys of the Galaxy smartphone, in particular.

Hello is Facebook's rival to TrueCaller

Facebook has launched a voice-calling app for Android phones. Called Hello, this app gives people information about who is calling them. Since the app is connected to Facebook, its users can view information about their callers' identities even if they do not count them as contacts.

LenDen, the neighbourhood marketplace

US based mobile marketplace LenDen has unveiled its free mobile application for Android and iOS. It is a mobile marketplace to exchange items within the same category or different ones within a locality. The platform helps users locate sellers on a map, connect them and strike deals.

Ultra-high-definition LED TV from Micromax

For four-times sharper entertainment

This LED TV from Micromax features 4K resolution (3840x2160 pixels), 124cm (49-inch) ultra-high-definition (UHD) display, brighter and sharper picture quality and a 178° viewing angle, which allows the user to watch TV from anywhere in the room.

Price: ₹ 48,990

Features like box speakers, a five-band equaliser, noise reduction and SRS sound system provide crystal-clear sound clarity.

Using the somatosensory RF remote, the user can enjoy the luxury of not having to point at the screen to change channels and surf the menu. The remote also doubles up as a controller for games. Voice command lets the user say the command out loud to surf the Internet and play videos, movies and music.

It also features a Wi-Fi hotspot, which turns the TV into a Wi-Fi hotspot by connecting it to the Internet via a LAN cable. The mobile HD link allows the user to play videos from his or her smartphone using MHL.

Xiaomi launches Mi Band

A band that understands your every move

The Mi Band features a military-grade sensor, ultra-thin 8mm battery that can last for 30 days and Bluetooth compatibility, and is also water-resistant. This wearable lets the user work towards a healthier lifestyle by monitoring his or her activity levels, tracking walking distance and calculating calories burned.

It also monitors and analyses the user's sleep activity by measuring the length and quality of sleep. The user can get action plans from the Mi Band app to improve

sleep quality based on data about deep-sleep and light-sleep cycles.

The band is compatible with Mi 3, Redmi Note 4G or any device with Android 4.4 and above, and iPhone models 4S and above that run on iOS 7.0 and above.
