

Ten Android Apps for Everyday Use on Your Smartphone

Magimai Prakash has completed a B.E. in computer science. As he is deeply interested in Linux, he spends most of his leisure time exploring open source

An Android phone can be greatly enhanced by installing some good apps. For a newbie, the selection of apps becomes a herculean task as the choice is so vast. This article offers some guidelines for selecting apps, while reviewing the top ten Android apps for regular use.

Google Play is one of the key reasons why Android has been a grand success in the smartphone market. This store hosts more than 1.3 million applications or apps of every kind, but how does a first time Android user select an app from such a vast range?

Each app is unique in nature and serves its purpose, but the real catch is how well suited it is for you and your device.

This article showcases some of the best apps in open source that can be suitable for your daily needs with respect to:

1. Device compatibility
2. Resource consumption (such as memory, CPU and data)

3. Updates
4. Data protection
5. Performance ratings

All open source apps mentioned here are available on Google Play as well as F-Droid.

Mozilla Firefox

Mozilla Firefox has been the best open source browser for years. The mobile version of Mozilla Firefox comes with a sleek interface, which enables the user to switch through various options such as recent tabs, history, top sites and bookmarks, among others.

Although there are many features and add-ons available for Firefox, I would like to mention just two of the most outstanding.

Reading List add-on enables you to save Web pages for offline reading.

Save as PDF add-on enables you to convert Web pages into a PDF without much hassle.

Telegram

Telegram was originally launched in 2013 but it soon became a popular instant messenger (IM) for Android. At present, there are more than 35 million users of Telegram, worldwide.

Telegram is based on cloud platform and is aimed at speed and security.

While there are plenty of other IM clients for Android, what makes Telegram really stand out, from the rest of the apps out there, is:

1. It is open source
2. It features secret chats
3. It enables self-destructing messages
4. Groups with a maximum capacity of 200 members can be created
5. It provides support for almost every file format

K-9 Mail

Most email clients that come by default in Android devices are sufficient for personal use, but if you are looking for an option to
