

Powered By

PhiRoS - A real world 3D content editor, animator and physics simulator.

PhiStudio - A visual IDE (Integrated Development Environment).

PhiXen (Fission) - A protocol agnostic framework for building real-time distributed systems.

PhiXOS - A reliable, efficient, small footprint, real time multitasking operating system.

PhiHardware - Development boards, sensors, actuators, drivers, controllers, mechanical building blocks.

Motion Control - Accurate motion control solutions : 0.04% error for linear motion and 0.2% error for angular motion.

Software Libraries - Powerful suite of software libraries for computer vision, navigation localization, mapping etc. for custom robots.
