

Nuts & Boltz Makerspace: Library and its Evolution

The traditional role of library in society is facilitating the creation of knowledge in our communities. These promote literacy by providing an environment, resources, discipline and instructions towards reading and writing. Today, the concept of literacy encompasses much more than just reading and writing, it has evolved into "transliteracy", i.e. ability to read, write and interact across a range of platforms and tools. Now the model of employment in 21st century is changing; entrepreneurship is becoming increasingly important to our economy. Many of the fastest-growing fields of today didn't even exist ten or twenty years ago. New ideas demand new technologies and new technologies demand new skills. So, our job now becomes providing access to new technologies and instruction to support new literacies.

HELP WANTED 21st CENTURY CAREERS

Today there are numerous venues where we can learn about entrepreneurship, startups, and the web. Places where one can take an accounting 101 for startup classes, learn about HTML5, and enter a pitch contest.

That's great, but....What about all the other things we're interested in as smart, curious people? Especially around the topics

of science, carpentry, tool handling, creativity, technology and engineering? Where can we go?

- Enrol in a university program? Too long, too much money required.
- Self-learning online? Boring, too much self-discipline
- How do you get thinkers from multiple disciplines talking and creating?

"Nuts & Boltz Makerspace: A Place For People With A Purpose!"

Nuts & Boltz Makerspace members enjoy access to a state-of-the-art maker lab, open collaboration space, classes and experiential workshops, manufacturing facility, material and project store, and world-class speakers and events. We believe our makerspace will help people find jobs and establish new businesses by providing access and instruction in the use of new technologies to the general public, many of whom have no other means of accessing these new technologies—makerspaces can play an important role in developing a strong workforce.

- People will bring their ideas to makerspace and can share it with others to construct the prototype.
- We offer hands on learning programs on most advanced technologies.
- Provides accessibility to work on new gadgets.
- Provides environment to interact with like-minded people.

We offer a professional maintained manufacturing facility that includes the tools and machines for precision metal machining, electrical fabrication, electronics stations, 3D printing, woodworking tools, robotics, UAV's, computer-aided design, aero modelling and physical computing. We are currently promoting more research build groups in which users can connect with professionals to work upon some open ended problem solving projects like: Drones, Humanoids Robotics, Wearable's, IOT, Rapid Prototyping, Art & Craft, Soft circuits, Tinkering etc.

Varun Heta Founder: Nuts & Boltz Makerspace

He has been an engineering entrepreneur, researcher, educator, photographer and most of all a lifetime maker, a graduate in Electrical Engineering from Institute of Management Studies. He is looking forward to develop an advanced educational and innovation laboratory for the community and believe that one day this community will produce next generation entrepreneurs.

Address: Nuts & Boltz Makerspace, Section-6, Block-A HAFED, Near Wazirpur Bus Depot Delhi 110035. Opposite D-Mall Netaji Subhash Place.
