

Processor

MediaTek has launched MediaTek Helio X20, the world's first mobile processor with Tri-Cluster CPU architecture and 10 processing cores (deca-core). Helio X20 continues MediaTek's mission of delivering computing performance coupled with power efficiency. It integrates MediaTek's WorldMode category 6 LTE modem with carrier aggregation and upgraded CorePilot 3.0 advanced scheduling algorithm.

Converters

Texas Instruments (TI) introduces world's first multichannel inductance-to-digital converters with four new devices in the LDC1614 family. The devices offer two or four matched channels and up to 28-bit resolution in a single IC.

By integrating up to four channels in a single IC, the LDC1614 family allows designers to distribute sensors throughout a system, while centralising electronics on fewer printed circuit boards (PCBs). This can benefit precision linear or rotational sensing and metal detection in a variety of end equipment, including white goods, printers, cameras and automotive infotainment consoles.

TEST & MEASUREMENT

Oscilloscope

The new Keysight 3000T oscilloscope is the next generation of the InfiniiVision X-Series. With a 21.6cm capacitive-touch display and zone-touch triggering, you can trigger on

any signal in just seconds. The 3000T also offers a 1,000,000 wfms/s update rate, standard 5GSa/s sample rate, and

capabilities of six instruments in one.

LEDs

HV SMD LEDs

Kwaliti Photonics introduces a range of white HV SMD LEDs—KL5L3030W9V 130Lm, KL5L2835W18V 65Lm and KL5L5730W18V 75Lm. These small-footprint high-power LEDs emit 130Lm/W and run at 120mA, 60mA and 30mA, respectively.

HV LEDs have strong thermal dissipative package structure and are compatible with other LEDs. The main advantages of HV LEDs are the low current drive of just 120mA and reduced number of LEDs in each string.

Arrays

Lumileds launches a cost-effective line of chips on board (CoB) LED arrays with punch and efficacy. The LUXEON CoB compact range enables the most cost-competitive solutions for PAR, GU10 and MR16 lamps. This line of arrays can be used for both a 35W equivalent and a 50W equivalent GU10 or MR16 lamp, thereby reducing system cost and development effort to the manufacturer.

Lumileds

COB arrays

The XNova LED array series delivers solutions for the most demanding spot lighting, down lighting and directional applications in general lighting. Available in lumen packages from less than 300lm to over 15,000lm with efficacies exceeding 130 LPW.
