

Key features include:

1. Efficacy over 130LPW provides energy savings in warm white
2. CRI options of 80/90/95 to meet a range of application demands
3. 2-step and 3-step binning options for high level of colour uniformity from array to array
4. Flux options ranging from 300 lumens to 15,000 lumens at 85°C
5. All Luminus COBs are tested and binned at 85°C to deliver guaranteed lumens, chromaticity and CRI at typical hot operating conditions
6. High lumen per watt

## POWER SUPPLY

### Electric rickshaw battery

INPHYNT E-Tour electric rickshaw battery is based on the international golfcart battery design. The battery is an entirely new class of deep-cycle batteries that addresses two core issues of the market, namely, longer life and better mileage.

The battery is made of highly-pure lead antimonial alloy, with thick grid design that reinforces the strength of grid structure and reduces corrosion at the same time. Highly-fortified grid structure, use of special binders in pasting, improvised use of world-class separators, copper rings in assembly and dual poles give the battery an exceptionally long life and reduce downtime.

### Power supply module

The new AAF-05 series from MINMAX is a range of ultra-small, fully-encapsulated 5W AC-DC power supply modules that are designed for easy PCB mounting with solder pins.

The modules feature an EMI filter to meet EN 55011/55022, class B and EN 55014. EMC immunity complies with EN 61000-6-1. The low standby power consumption complies with European ErP Directive 2009/125/EC.

Universal input voltage range of 84V AC-264V AC and an international safety-approval package qualifies these power modules for all markets.

## SOFTWARE

### Compiler

Renesas has launched CC-RL C compiler for the RL78 family of 16-bit microcontrollers (MCUs). The compiler takes advantage of RL78 MCU group's low-power innovations and achieves increased processing performance to respond to industry needs for high performance and low power consumption in home appliances, industrial and automotive systems.

### OrCAD PCB

In a series of new launches, Cadence expands its OrCAD PCB portfolio with new products and technology. The newly-launched products offer seamless product integration, comprehensive fabrication checks and simplified documentation methods. Products like OrCAD Component, OrCAD DFM Checker, OrCAD Panel Editor and others focus on increasing designers' productivity by reducing design cycle time and facilitating more advance designs via additional high-speed capabilities.

## MISCELLANEOUS

### IP based access control panel

Matrix has announced the launch of COSEC ARC, which is an intelligent

compact IP panel with PoE for a single door, making installation simple and scalable. Its dual modes of operation make COSEC ARC a perfect device to work in a standalone mode for a single location without any software or in a network mode for multi-locations with COSEC CENTRA software.

COSEC ARC can control two readers on Wiegand or RS485, door lock and other auxiliary devices required for one door, hence providing a solution for any access control installation.

### IP camera

The wireless cube IP camera from CP PLUS consists of a 3.6mm fixed lens and 1MP CMOS image sensor. It is capable of two-way audio and has an in-built microphone that has an effective range of 5m. It has the capability of recording in a video resolution of 1280 × 800 at up to 30 frames per second (fps).

### Embedded multimedia card

Transcend Information has launched EMC210 eMMC (embedded multimedia card) storage solution. The MLC based EMC210 features simplified interface design, enhanced storage capacities, upgraded performance and a set of comprehensive functions.

The small factor eMMC is an embedded storage ideal for mobile devices, embedded devices and industrial applications, and is compliant with Joint Electron Device Engineering Council (JEDEC) version 4.51 standards.
