

USEFUL WEBSITES

ALL ABOUT FPGAs

Field programmable gate arrays (FPGAs) are ICs that can be programmed to perform any logic function. Given in this section are a few websites that could be useful in learning and understanding the technology behind FPGA

Compiled by **NIRAJ SAHAY**

ni.com

In the past, FPGA technology was only available to engineers with a deep understanding of digital hardware design. This site unfolds the details of FPGA. It allows users to learn about FPGA design with NI LabVIEW system design software. The white paper on the site is a good resource on FPGA fundamentals. Videos on Getting Started With LabVIEW FPGA, too is an excellent resource for understanding FPGAs.

FPGA Central

FPGA Central claims to be the world's largest FPGA and CPLD portal. The site provides a central place for FPGA and CPLD vendors and users to share experiences and information about FPGA design, development, verification, validation, process, tools and products. FPGA tutorials on the site have been created by 1-CORE Technologies, an FPGA design services provider.

fpga4fun.com

FPGA is a wonderful technology but can be intimidating. This is what Jean P. Nicolle, creator of this website, believes. As many FPGA vendors are providing affordable parts and free tools, now is the right time to learn, claims Nicolle. fpga4fun.com provides information on FPGAs and FPGA projects to build with an FPGA board. It provides examples and a great learning experience for beginners as well as professionals. It reflects the author's experience and opinions on FPGA technology.

altera.com

Altera Corp. is a pioneer in programmable logic solutions. It offers FPGAs, systems on chips with embedded processor systems, complex programmable logic devices (CPLDs) in combination with software tools, intellectual property, embedded processors and customer support. Apart from several tutorials and online courses, the site has a free online course on How to Begin a Simple FPGA Design. This training is for engineers who have never designed an FPGA before. They can learn about the basic benefits of designing with FPGAs and how to create a simple FPGA design using Quartus II.

xilinx.com

Xilinx is the world's leading provider of all-programmable FPGAs, systems on chips and 3D integrated circuits. These devices are coupled with a next-generation design environment and intellectual property to serve a broad range of customer needs, from programmable logic to programmable systems integration. The website has a dedicated FPGA Tutorials section, which includes tutorials on ISE Design Suite, ChipScope Pro and Embedded Development Kit.
