developed by FOSSEE group at IIT Bombay, is dependent on OMOptim for optimisation. Using this, one can solve problems such as finding the

value of the resistor that will make the rise time less than 0.3 seconds.

A complete set of self-learning instructional material will be

launched soon through the award-winning Spoken Tutorial methodology developed at IIT Bombay. Keep watching www.spoken-tutorial.org.

Peter Fritzsön, director of Open Source Modelica Consortium, adds that the chemical engineering department at IIT Bombay is using OM for modelling and simulation. It is in the process of making chemical engineering building blocks and CAPE-OPEN thermodynamics available in the environment.

Learn as you model

OM has an electronic notebook sub-system, DrModelica tutoring sub-system and DrControl for teaching about control systems, together with Modelica. You can also import and export works between different Modelica tools or between certain non-Modelica tools. Why not give it a shot this month? **EFY**
