

Electronics Projects

Building and designing your own projects is always exciting for hobbyists. This month we present some websites that will help you explore your creativity in terms of electronics projects

NIRAJ SAHAY

electroschematics.com

electroschematics.com is a website that discusses electronic circuits schematics, printed circuit board diagrams and electronics projects diagrams. It has a huge collection of electronic schematics including audio amplifiers, radio and IR transmitters, antennae, DIY kits and more. The website has a total of 1447 electronic projects and circuits.

electronicsforu.com

This portal serves as a storehouse of information for the electronics and technology industry, besides latest news and information about new products. It also includes the hugely-popular EFY tested circuits, reproduced from Electronics For You magazine. The website has different sections of electronic projects, which have been broadly categorised as DIY, Construction and Circuits.

electronics-lab.com

This website is for electronics hobbyists. Here, you can find useful circuits with full description, diagrams, PCBs, electronics articles, links and downloads. The site has approximately 55,406 posts on 9115 topics in four different categories. The project section has 279 projects listed on various topics. The site also has a forum where you can discuss these projects.

<http://electronicsproject.org/>

electronicsproject.org

The website has a good collection of electronics projects from basic to advanced level. It also has tutorials and circuit ideas. The website features simple alarm projects as well as advanced microprocessor and microcontroller based projects.

electronics-project-design.com

This website provides schematics and parts lists of various projects that you can experiment with. It also includes articles on the importance of reliability testing, electromagnetic compatibility (EMC) testing, failure mode effect and analysis (FMEA) and fundamentals of electronic parts. Required test and measurement tools are also discussed before you embark on your journey of building your own electronic project. The website gets updated from time to time with new projects and tips.
