

Fig. 3: Author's prototype

EFY Note

The source code of this project is included in this month's EFY DVD and is also available for free download at source.efymag.com

You can make a directory anywhere in your Raspi, say, in /home/pi/EFYmail folder and save Python script as email.py

in that directory. Now, go to the end of /etc/rc.local file and add sudo python /home/pi/EFYmail/email.py before the word exit as given below.

Note that rc.local file may have other active lines too besides this new command line, but it will work for all of these. For making any command off, we can put # in front of that line. A typical rc.local file is given below:

```
----- /rc.local file -----
_IP=$(hostname -I) || true
if [ "$_IP" ]; then
    printf "My IP address is %s\n" "$_IP"
fi

sudo /etc/init.d/motion stop
#/home/pi/webcam.sh
#/home/pi/start.sh
sudo python /home/pi/Ada/iptalk2mcp.py &
#sudo /home/pi/gps.sh
#sudo python /home/pi/Ada/lift.py &
sudo python /home/pi/EFYmail/email.py &

exit 0

----- end of file -----
```

& at the end is optional. Adding it means that the script will run in the background.

Run it and see how it sends notifications about incoming emails. Since Raspi is a perfect slave, it will do this job once every 60 seconds. Every time Raspi boots, it will check and notify you about any incoming email, without fail. Author's prototype is shown in Fig. 3. ●

Somnath Bera is an avid user of open source software. Professionally, he is a thermal power expert and works as additional general manager at NTPC Ltd
