Java Runtime installed on your PC. For complete set-up instructions, go to <http://appinventor.mit.edu/explore/setup-mit-app-inventor.html> and follow the instructions given in Setup MIT App Inventor as shown in Fig. 1.

After setting up your PC with the required tools, you need to sign in to beta.appinventor.mit.edu with your Google ID. For every project we will work in two phases, namely, Designer, where you will define the user interface of the application and, second, Blocks Editor, where you will decide the function of each component you have added in Designer. An App Inventor Designer is shown in Fig. 2 and Blocks Editor is shown in Fig. 3.

Now, click on My Projects and then New. Assign a name to your project and you will get back to Designer page.

The default component that is added to every project is Screen1, where you will place the rest of the components. For this project we
