

SELECTING THE RIGHT LED BULB

LED is the future of household lighting, but do we know which LED to buy? Every day we come across advertisements for LED bulbs. Even the Indian government is taking initiatives to increase their usage. However, the multiple brands available in the market often confuse buyers. EBY, in its attempt to resolve the confusion, has identified ten LED bulbs available in the market today. We started our research online with marketing sites, such as Flipkart and Amazon. Amazingly, we found almost 30 companies/brands that claimed to sell in India. Distributors and retailers we spoke with confirmed the specifications of the brands available in the market
