In today's world, people prefer not to travel alone; they need a physical companion that they can use to carry their personal and official data, like a data storage device. Tablets and smartphones are not known for their storage capacities—a few apps, a handful of media, and you are out of space. Enter wireless storage! These devices are essentially self-contained media servers, serving up your audio, video and files to multiple tablets, smartphones and other Wi-Fi-enabled devices anywhere you feel like taking these.

Wireless storage devices come in different storage capacities and levels of speed, and it is up to you to find the best one to meet your needs and budget. If you are seriously looking to invest in a wireless storage device, it is vital to invest in one that gives you the best functionality to meet your computing requirements. Here are some factors that buyers can keep in mind while going for a storage device for their homes and offices.

Apps

Does the device have a downloadable app for your iOS or Android device? Does

it offer a browser based application for other devices? Users must make note of the required apps available with the device. Through different apps they can easily stream media files on-the-go.

One popular hub serves as its own Wi-Fi access point of sorts. You connect your smartphone, tablet or laptop to it the same way you would connect to any wireless hotspot. The hub's app must not only allow access to stored files, but redirect the device to the main Wi-Fi network so you can continue getting access to the Internet.

Size matters

Sure, all storage devices are portable but some may be more portable than others. Some, for example, are just tiny flash drives, whereas others contain a full-sized disk. Choose one that suits your portability needs.

Some come with an incredible built-in space that gives unbelievable storage capacity for storing hundreds of movies, as well as thousands of MP3 tracks and tons of office/home documents. These also come with integrated Wi-Fi networks that
