LEDs

Automotive LEDs

EVERLIGHT Electronics has introduced the sulfur resistant golden series, which performs brilliantly, even in severe environments, and is expected to satisfy all demands of automotive applications.

The advantage of PC amber is enhanced brightness at high temperatures. Their three-chip manufacturing process over the four-chip process for traditional amber LEDs results in a brightness decay at 85°C of only 15 per cent versus 30 per cent to 50 per cent for original amber LEDs, thus providing thermal and colour stability performance.

White SMD LED

Taiwan based LED chip and package manufacturer, Lextar Electronic, has launched 1W in 3030 package for the Indian market. The package is ideal

for indoor and outdoor commercial lighting applications. The new device, PC 3030H01 V1 EMC package, offers good thermal resistance, giving a flexible choice to drive LEDs between 0.6W and 1.5W at type current of 150mA and maximum current capacity of 240mA.

The product has a thermal resistance of 12°C/W and maximum junction temperature of 125°C. The device is LM80-qualified and has reported L70 life of > 54,000 hours.

MISCELLANEOUS

Digital key phone

EON310 is an executive digital key phone engineered to deliver feature-rich, reliable and efficient business communications. With its sophisticated design and classy looks, EON310 is tightly integrated with ETERNITY IP-PBX systems for speed of operations and better workforce collaboration.

It features a two-line LCD display, direct station selection (DSS) keys, headset connectivity, high-quality full-duplex speaker phone and high-definition voice quality.

Acrylic paint

The 838 total ground carbon conductive coating is an economical, acrylic paint that is used to create conductive, static-free surfaces with excellent characteristics. Coated surfaces reduce electromagnetic or radio fre-

quency interference (EMI/RFI). The carbon in the coat resists rubbing off to the touch. Further, the cured coat is designed to withstand large temperature changes without cracking.

The 838 coating adheres to most materials found on printed circuit assemblies. However, it is not compatible with contaminants like water, oil and greasy flux residues that may affect adhesion.

Projector

ViewSonic Corp. has introduced PJD7822HDL, a full-HD 3200 lumens home entertainment projector. With dual-HDMI inputs and a USB charging port, PJD7822HDL offers flexible connectivity to high-definition devices, as well as compatibility with wireless HDMI dongles such as Google Chromecast.

It also includes 3D compatibility, an integrated speaker and SuperColor technology for a wider colour range and true-to-life image projection.

Equipped with 3200 ANSI lumens and 15,000:1 contrast ratio,

this projector displays clear, bright images even in rooms with high ambient light. In addition, a short-throw lens with 1.3x optical zoom offers flexible set-up options for smaller rooms.
