8-BIT PIC® MICROCONTROLLERS

PIC® microcontrollers with Core Independent Peripherals take 8-bit MCU performance to a new level. With a number of on-board modules designed to increase capability in any control system, these MCUs represent the best value in embedded design.

Core Independent Peripherals are designed to handle their tasks with no code or intervention from the CPU to maintain operation. As a result, they both simplify the implementation and boost the performance of complex control systems while giving designers the flexibility to innovate.

Flexible Functional Building Blocks

- Power conversion
- Signal generation
- Motor drive
- Sensor interface
