CMOS image sensor

T4KE1 is a 2.1MP 1.12µm BSI CMOS image sensor that can capture images for recognition with higher sensitivity than conventional CMOS image sensors. It discards the usual colour filter in the pixel structure, increasing sensitivity in the near IR spectrum. A serial interface, widely used in mobile devices, ensures easy integration.

Thermistor probe assemblies

Ametherm has announced its ability to completely customise the company's offering of NTC thermistor probe

assemblies to meet specific needs of any application. Designed and built in as little as two weeks, the units are the ideal choice for high-accuracy temperature sensing and measurement for IGBT chips and heat-sinks in welding equipment, plasma cutters, air sensors, electric motors and HVAC systems.

Hall sensors

Micronas has announced the extension of its direct-angle Hall-effect sensor family HAL 37xy with its dual-die variant HAR 37xy. It integrates two fully-automotive-qualified silicon dies in a single SOIC8 package for high-precision direct-angle and linear-position measurements for demanding automotive and industrial applications.

The sensors are well suited for

angle measurement as well as for linear-position detection in automotive and industrial applications and operate in a junction temperature range from -40°C to 170°C.

TEST & MEASUREMENT

Land mobile radio analyser

LMR Master S412E land mobile radio (LMR) analyser is an all-in-one field and lab instrument. It is the ideal instrument for LMR, professional mobile radio

technicians and engineers engaged in field testing the RF performance of NBFM, P25, P25 phase 2 (TDMA), NXDN, ETSI DMR, MotoTRBO, ETSI TETRA and LTE for commercial, public safety, maritime and critical infrastructure radio systems.

Infrared thermometers

MECO infrared (IR) thermometers are used to measure the amount of heat present in an object from a distance. Temperature range of IRT380P

is from -50°C to 380°C with an accuracy of $\pm 1.5^\circ\text{C}$ and emissivity of 0.95. Temperature can be measured with the distance-to-spot ratio of 12:1.

It has seven special functions, namely, max function, min function, °C/°F selection, laser switch, auto power off, low battery indication and backlight display.

LED LIGHTS

CoB downlights

The new GL-DLC06 chip-on-board (CoB)-powered 15.2cm (6-inch) re-

cessed downlights from GlacialLight feature the latest CoB LEDs for high energy efficiency as well as high performance thermal cooling due to

over 100 lumens per watt of LED lighting. With 15W (1600lm-1720lm) and 35W (3500lm-3800lm) versions, the new downlights come

in a variety of colour temperatures and feature an unobtrusive white design that blends in with most interiors.

LED control system

Schröder's solution combines the latest-generation LED luminaires, luminosity sensors and a control-management system. The control system interprets the data it receives from sensors and automatically converts it into commands for the luminaires (via DALI protocol) to vary the intensity and exact the amount of artificial light required. This automatic dimming of the light ensures that only the energy that is absolutely necessary for achieving the defined lighting levels is used and prevents any possible excess lighting.

MISCELLANEOUS

Video surveillance management solution

SATATYA SAMAS is a fully-distributed solution designed for 24/7 video surveillance needs of multi-location, multi-server organisations. It provides features like multi-monitor applications, sequencing, audio-visual alerts, SMSes/emails with snapshot notifications, integration with access control, basic intelligent video analytics and POS for easy central and remote monitoring of organisations.
