Wireless lighting system

Philips Hue is a personal wireless lighting system that is extremely intuitive and easy to use. It uses a wireless LED technology that allows users to create and control home lighting using their smartphones or tablets. It works across both iOS and Android mobile platforms to create personalised ambient lighting.

TOOLS & EQUIPMENT

Rework system

Manncorp's RW1210 SMT/BGA rework system features an enhanced touchscreen user interface containing

selectable operating modes that fully automate removal, placement and soldering sequences for increased operator efficiency. It also includes an enlarged board holder to handle extra-large PCBs up to 430mm x 360mm

(17-inch x 14.25-inch) in size.

MISCELLANEOUS

Dental 3D printer

While compact in size, Objet30 Dental Prime is versatile, with a choice of 3D print modes: high quality and high speed. The high-quality mode prints 3D models with superior surface finish and intricate, delicate features required for precise fittings on crown, bridge and prosthetic models (in 16-micron layers). The high-speed 3D mode prints at accelerated speeds to produce orthodontic models and surgical guides with increased productivity (in 28-micron layers). Together, these two enable smaller labs to produce a wide range of dental and orthodontic appliances in-house.

Talking calculator

The advanced, four-line scientific calculator, with higher-level maths and science functionality, is ideal for middle-school through college students. A clear, high-quality, recorded voice announces each key and the answer on the display, providing a choice of speech modes for quiet or

verbose operation.

The Orion TI-30XS talking scientific calculator may be used in high-stakes exams as an approved accommodation for students who are visually impaired, if it is specified in the education programme.

Remote-spectrum monitor

Designed without a display or keyboard, the monitor automates the method of conducting radio surveillance, interference detection

and government spectrum policy enforcement while bringing greater flexibility and cost efficiency to network management. It features two spectrum monitor modules at introduction. Each module has the power of arrival algorithms to monitor for interference and approximate the position of the interfering signal being generated.
