

ARM® Computer on Modules: Low on power, high on performance!

Powered by : • NVIDIA® Tegra™ • Freescale® Vybrid™ • Freescale® i.MX 6

FINE-TUNE THE **3P** PRICE PERFORMANCE POWER

OF YOUR EMBEDDED DESIGN WITH **COLIBRI COMPUTER ON MODULES**

Colibri T30 & Colibri T20

- NVIDIA Tegra 3 & 2; Up to 1.4GHz
- On-board Flash up to 4GB; RAM up to 1GB
- Supreme graphics and industrial temp. support
- Industrial interfaces (UART, I2C, SPI, etc.)

Colibri iMX6

- Freescale i.MX 6DL & i.MX 6S; Up to 1GHz
- On-board Flash up to 4GB; RAM up to 512MB
- Industrial temp. support
- Industrial interfaces (UART, CAN, I2C, etc.)

Colibri VF61 & Colibri VF50

- Freescale VF61 and VF50; Up to 500MHz
- On-board Flash up to 512MB; RAM up to 256MB
- Low cost & industrial temp. support
- Industrial interfaces (UART, CAN, I2C, etc.)

Windows Embedded Compact (WEC)

- Free pre-built images for WEC 7 & 2013 developed in-house
- Freely downloadable BSPs, workspace & libraries
- Runtime license included in price of module
- Enhanced feature compared to standard WEC

Embedded Linux

- Highly optimized BSPs developed in-house
- All peripherals are supported out-of-box
- BSPs based on Ångström/OpenEmbedded being fully Yocto compatible
- Customers can modify & redistribute the source code

Carrier Boards

- Off-the-shelf carrier boards available
- Design files freely available for custom board development
