

Fig. 3: AV controller board, composite component video, digital video-out; stereo cum 5.1-channel audio-out RCA connectors

Fig. 4: Final prototype of the USB DVP with remote control and USB drive connected

component, PR: red component and PB: blue component). And if you have a digital video coaxial cable, you can connect the same at the orange port.

9. Now connect the RCA cables for the following speakers: front left/stereo left, front right/stereo right, surround left, surround right, centre speaker and sub-woofer.

10. Insert a USB pen drive into the USB host receptacle.

11. Slowly and carefully power on the whole setup. You can now watch your favourite movie stored in your USB pen drive from a new, home-

made portable device.

Caution. After opening the DVD player's cover (step 1 above), pull out the cables meant for the front panel and power PCBs slowly and very carefully, as some capacitors may have stored very high-voltage static charges that can be dangerous, or even lethal, and may lead to irreversible nerve reflexes. Also, beware the live AC voltages present in the power PCB. ●

Bukya Sridhar is B.Tech in electronics and communications engineering and enjoys coding in JavaScript. He has a keen interest in space technology (satellite communication) and mobile communication
