

BINAY - Lighting Up The Future

BINAY LED-based HIGH, MEDIUM and LOW Intensity Aviation Obstruction Light Beacons

As per International Civil Aviation Organisation (ICAO) requirements Available in Low Intensity, Medium Intensity and High Intensity versions (as per International Civil Aviation Organization guidelines), BINAY's patented LED Aviation Lights come with 5-year/3-year warranties

LED Obstruction Lighting for:

- Industrial chimneys and smokestacks
- Transmission, microwave and cellular towers
- Radio, TV and similar structural towers
- High-rise buildings and structures
- Airports and airfields

The BINAY LED Aviation Obstruction Light offers the following advantages:

- Fit-and-forget maintenance-free operation
- A long life of 100,000 hours (20 years at 12 hours daily burning)
- Pays for itself within a short period of operation in the form of reduced installation, maintenance and servicing costs
- Quick Installation; Reliable operation 365 days per year
- Shock-proof and vibration-resistant
- Over-Designed Intensity to allow for natural LED Intensity degradation over its operating lifetime

THE BINAY LED OBSTRUCTION LIGHT IS UNDER ACCEPTED PATENT, AND AS SUCH IS A PROPRIETARY PRODUCT

POWERING LED TECHNOLOGIES WORLDWIDE SINCE 1983

Stretchable metal

its size. This could solve one of the biggest challenges in the growing field of flexible electronics.

The team from Voiland College's School of Mechanical and Materials Engineering includes associate professor Rahul Panat, professor Indranath Dutta and graduate student Yeasir Arafat. They decided to experiment with indium, a soft and malleable metal already used in electronics. They bonded it to a plastic layer and managed to stretch the metal film to more than twice its original length without breaking.

Tiny brain implant could treat depression

The human brain is the most powerful computer. It is an extraordinary assembly of living electrical circuits. To understand it better, neuroscientists often electrically stimulate the brains of simpler animals as they move around, carry out tasks and respond to their surroundings.

Wirelessly-powered brain implant could help treat depression

A wirelessly-powered implant, almost the size of a grain of rice, can electrically stimulate the brains of mice as they carry on with their daily activities. This new device could help scientists better understand and treat mental health disorders such as depression. They have created an implantable wirelessly-powered brain-stimulating device by using the mouse's body to
