

India's defence electronics market pegged at US\$ 70 billion

According to a paper presented at Defconics 2015 by consultancy firm Roland Berger and India Electronics and Semiconductor Association (IESA), India's defence electronics opportunity can cross more than US\$ 70 billion over the next 15 years. Defence electronics spending in China, Russia and India is growing fast and by 2022 these countries could command a market share of five per cent each.

Opportunity for electronics in defence systems in India is spread across standalone equipment (about US\$ 18.5 billion) and at a sub-system level, where the total electronics opportunity is estimated to be over US\$ 58 billion in the next 15 years. Land systems opportunity for Indian companies is around projects such as infantry combat vehicle, main battle tank, artillery and launcher programmes. Naval opportunity is around platform programmes of conventional submarines, frigates, aircraft carriers and support vehicles. In Air Force, the market could open up around supplies to fighter and transport projects.

ELCINA Raaga Mayuri Park to get eight electronics units

The ELCINA Raaga Mayuri Electronics Park would probably kick-start over eight units that will make electronic components for defence and aerospace sectors, among others. The industrial park has already attracted three units.

The electronics park has received in-principle approval from the government's Department of Electronics & Information Technology (DeitY). It was developed by KJR Group in Anantapur district of Andhra Pradesh and was set up in partnership with ELCINA. It is located alongside National Highway 7.

KJR Group is spending around ₹ 500 million on infrastructure, and Mysore based Vinyas Innovative Technologies will set up two units, one of which will be DCX, its joint venture with the US based company, which makes high-end wires for defence and aerospace sectors.

TCOE India to create ₹ 10 billion Innovation Fund

Department of Telecommunications (DoT) along with Telecom Centre of Excellence (TCOE) India recently organised their first event. At the event, TCOE India proposed to create an innovation fund worth ₹ 10 billion for 1000 start-ups.

Speaking at the event, joint secretary (telecom) V. Uma Shankar stated that TCOE has been created to strengthen the research and development ecosystem in the information and communications technology (ICT) sector, where government as a facilitator, industry as the ultimate user and academia as the research unit have generated a lot of success in the last eight years. They have now

opened up their research platform to all stakeholders of the ICT sector.

Rakesh Garg, secretary DoT and DeitY emphasised the need for IPR creation, frugal innovations and design-led manufacturing within the country.

DoD forms consortium to develop flexible hybrid electronics

The Department of Defense (DoD) has announced the formation of a consortium of more than 160 companies, non-profits and universities for developing flexible hybrid electronics, based at Manufacturing Innovation Hub in Silicon Valley. The focus of the consortium will be on flexible electronics, which has close ties to mobile health. It will develop wearables and improved medical health monitoring technologies that can be utilised by the military.

The DOD will provide US\$ 75 million to Manufacturing Innovation Institute for Flexible Hybrid Electronics, while government, academic and industry sectors will provide an additional US\$ 90 million in funding.
