

GEIST

**MONITOR** | Watchdog

## Monitor:

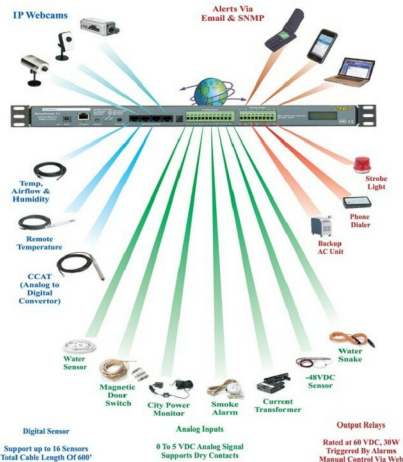

Environmental factors like heat, humidity and moisture pose a severe threat to your mission-critical infrastructure. These dangers can be minimized by incorporating a network of Geist sensors to collect data and alert users to potential threats.

Geist's line of monitoring products allows users to observe conditions from a secure Web interface and receive SNMP, email, text message or voice call alert notifications when environmental sensors detect a problem.

The Web interface can display live video surveillance and environmental measurements including temperature, humidity, airflow, light, sound, power and water detection.

Measurements are logged to track trends. Units equipped with dry-contact relay outputs can be used to trigger external devices, either automatically via programmed alarm thresholds or manually via the Web interface.

### Web-Enabled Climate & Power Monitoring

#### Watchdog 15 P

The Watchdog 15 P allows users to keep an eye on remote conditions from a secure Web interface

#### Watchdog 1400 P

The Watchdog 1400 P comes equipped with four digital and six analog sensor ports, LCD display with scrolling measurements, built-in audible alarm and three relay output ports.

#### Watchdog 100 P

The Watchdog 100 P is a self-contained unit with built-in PDE and on-board temperature and humidity/dew-point sensors

#### GTHD

The GTHD digital sensor collects and transmits real-time temperature, humidity and dew point data to protect critical data center equipment from heat and moisture.

**OFFICIAL & ONLY DISTRIBUTOR OF GEIST'S MONITORING PRODUCTS IN INDIA, FOR MORE INFORMATION CONTACT US:**
