

STM32L4 MCU

Excellence in ultra-low-power with performance

- 100 DMIPS based on its ARM Cortex-M4 core with FPU and ST ART Accelerator™ at 80 MHz
- Dynamic run mode down to 100 μ A/MHz and 30 nA with backup registers without real-time clock
- Smart Peripherals: 3 x 12/16-bit ADCs (up to 5 Msps) Down to 20 μ A (10 Ksps) and 2 x 12-bit DACs (1 Msps)
- 4 nA VBAT mode with charging capability

ULTRA-LOW-POWER EXCELLENCE

The STM32L4 microcontroller is based on a new ultra-low-power platform featuring FlexPowerControl which extends flexibility to reach optimized power consumptions. With an EEMBC ULPBench score of 123 ULPBench™-CP, the STM32L4 outperforms the market in the ultra-low-power domain

HARDWARE TOOLS

A full set of evaluation boards enables flexible prototyping as well as full STM32L4 evaluation

SOFTWARE TOOLS

STM32CubeMX enables fast development thanks to its MCU clock configurator, power consumption calculator and code generation tools

STMicroelectronics Pvt Ltd

Plot No 1, Knowledge Park III,
Greater Noida 201308, Uttar Pradesh, India
