CCleaner (utilities, 3.23 MB)

CCleaner, a product of Piriform, is a graphical tool for optimising and cleaning Windows. It helps the users to keep their Windows system running fast. The software has an easy-to-use user interface that makes it user-friendly. It can analyse the current state of any Windows system showing the space occupied by the unwanted data, such as temporary Internet files, cookies, history, recent documents, temporary files on the system and clipboard, log files and memory dumps. After analysing, it gives the user the size that is occupied by the unwanted data. The user can delete the unwanted data and recover a lot of hard disk space. It also gives the user the feature to check registry errors and fix them.
