TOOLS & EQUIPMENT

Heavy-duty soldering station

The digital, high-power FX-838 soldering station from Hakko, Japan, is suitable for soldering large to fine components. It allows soldering at low set temperatures, thus reducing the risk of the damage to heat-sensitive chips and

work pieces. This also helps in reducing oxidation of the soldering tips.

The FX-838 operates at a maximum temperature of 500°C. This helps in soldering power supply boards easily because the high-power 150W hand piece can provide great thermal recovery. Output voltage of 27V is lower than the world safety norm of 30V.

Multi-card reader with three USB ports

Transcend Information has launched a multi-card reader (RDP7) with an integrated USB hub. With the addition

of USB 2.0 ports, this high-speed three-slot card reader can accommodate up to three USB peripherals in addition to reading most memory card formats available on the market.

The reader sports a stylish, handy

design with clearly labeled slots and a bright LED for indicating card insertion and data transfer. Measuring just 8.8×5.4×1.1 cm³, it takes up relatively little desk space and is extremely easy to carry around.

The reader is priced at Rs 1025.

TEST & MEASUREMENT

High-precision power analysers

Tinsley has introduced state-of-the-art power-quality analysers in single-phase, three-phase, four-channel and multi-channel versions for non-gapping power measurement and analysis.

Various units are available for precision measurement and analysis of power, energy, Trms values, har-

monics, flicker, transients, etc. These have measurement bandwidth of DC to 10 MHz and sampling rate of up to 3 MS/s, with basic accuracy of up to 0.03 per cent. Rated up to 1000V/32A, they come with PC interface, built-in memory storage and USB interface/floppy drive, process signal interface and graphics display.

'Made for India' multimeters

Fluke Corporation has introduced high-quality and cost-effective multimeters specially designed for Indian users. The 15B, 17B and 18B multimeters

have user manuals in diverse Indian languages like Hindi, Bengali, Tamil, Malayalam and Kannada.

Designed for both convenience and safety, the 15B and 17B inputs, ranges and functions are protected

to 1000V and feature a 100µF capacitance range. These also feature a 4000-count display and have automatic shutdown feature that maximises the battery life to an average of 500 hours. The 18B is a fast, intuitive and intel-

ligent tester for light-emitting diodes (LEDs). The LED function has two modes (jack detection mode and table pen test mode).

Power meter

The MECO Power Guard PG09 is useful in monitoring energy quality and consumption. It displays true RMS voltage, true RMS current, kW, PF,

kWh, energy usage time (EUT), etc on a large LCD with backlight. The EUT is displayed in years/ months/ days/ hours/ minutes. A red LED flashes when the energy is being used. The meter has a Class 1.0 accuracy and works over a temperature range of -25°C to +45°C.

The meter can be used for teaching, demonstration and testing of electrical energy saving of household
