

India lacks networking professionals

According to Cisco Systems, India faces a shortfall of 70,000 professionals in networking despite data centres mushrooming all over the country. It points out that the networking technologies that link the computers and the Internet are often neglected. Globally, the shortage is as high as one million.

An increasing trend to outsource IT infrastructure management will only widen the shortfall in the months to come.

"It is high time India trains more number of networking professionals to reap benefits," says Milind Gurjar, director of global market development and training delivery at Cisco.

Dell plans big for India

According to Michael Dell, India is one of Dell's top 10 markets. India, according to him, is the fastest growing market among the top 10, which also includes China.

Dell has big plans for India as he sees plenty of opportunities here. According to him, unique identification number (UID) is a very interesting and ambitious project. He is upbeat about the use of these cards for electronic medical records, as it could make a great difference in the event of a medical emergency.

In another development, Dell has become the first firm to export PCs from Indian shores.

DTH biggies plan HD STBs for games

Direct-to-home (DTH) TV service providers such as Dish TV, Reliance Big TV, Airtel Digital TV and Tata Sky are competing with each other to launch high-definition (HD) set-top boxes before the Commonwealth Games start in New Delhi in October this year.

HD set-top boxes allow wide-angle viewing, and therefore are suitable for watching sports and action movies. For DTH firms, these promise a lucrative revenue stream as they will be priced higher than traditional devices and carry higher monthly charges.
