

Total Flux Measurement System With Integrating Sphere, Spectrometer & Software

This system can measure total flux of incandescent lamps and a variety of LED lights. This system consisting of a high reflectance integrating sphere and spectrometer can measure spectrum, lumen, (x,y), λ_d , λ_p , colour temperature, crest value, wavelength, colour rendering index & electrical attributes of the measuring subjects.

The system can also be used to measure illuminance of projection lights and other indoor and outdoor lighting systems using a large 2000mm integrating sphere.

Our Product Range

Telecommunication Trainers

- Wireless Communication
- Data Communication
- Digital Communication
- Fiber Optics
- Analog communication
- Telephony
- Network Laboratory
- Antenna, Radar and Satellite

Test & Measuring Instruments

- Digital Multimeters & Calibrators
- Meters and Testers
- Function Generators
- Analog Oscilloscopes
- Digital Storage Oscilloscopes
- Analyzers
- Power Supplies

VLSI & Embedded Training Boards

- CPLD Training Boards
- FPGA Training Boards
- DSP in VLSI Training Boards
- Embedded Training System

Basic Electronics

- Discrete Components Trainer
- OP-AMP Trainer
- Linear IC Trainer
- Digital IC Trainer

(Dealers & distributors welcome. Required: Experienced people for handling the sales & service of Test & Measuring Instruments.)
