

speakers and power supply. The transmitter transmits the audio signals from the source wirelessly over RF link to the receiver unit. This line-level signal is amplified by the receiver before it is fed to the rear speakers, so there is no effect on the audio output. The 5.1-channel speaker system includes five speakers (centre, front left, front right and two rear speakers) and one woofer.

Though called wireless, these systems aren't completely wireless as they still need to connect to the power supply via cable. These are wireless in that you need not run wires across the room to the rear speakers kept at the other end of the room for surround sound.

Go for an add-on unit if you already have a home theatre receiver with the required speakers and want to do away with those speaker wires running across your room.

Its price will depend largely on the power and quality of the built-in audio amplifier at the receiver end of the wireless unit. Buying the speakers as part of the wireless unit also considerably increases the overall price.

Wireless units meant for home theatre systems don't come with speakers. Rather, these use the rear surround speakers of your home theatre system.

Bose SL2 wireless link for rear speakers is a case in point. It provides a wireless connection for surround speakers on Bose 5.1-channel Lifestyle and Acoustimass home entertainment systems. As it transmits signals over 5.8GHz band, there is almost no interference from your mobile phone, Wi-Fi network, microwave oven or other household appliances operating in 2.4GHz and 900MHz bands. It supports wireless transmission up to a distance of 9 metres (30 feet), which is large enough for a single-room installation.

To set up this link, you need to connect the transmitter and receiver units each to power supply. Then simply connect the transmitter to your Acoustimass module and the receiver

Philips HTS 8141 DVD SoundBar home theatre

Price
Rs 60,000

Indulge in cinema-like multichannel surround sound without speakers and wires all around you. Philips SoundBar with Ambisound incorporates a complete home theatre system, including DVD and CD playback in a single unit. It comes with a subwoofer box. It is simple to set up with only three cables to connect (power, subwoofer and HDMI to LCD TV).
