

## Logitech Squeezebox Boom with built-in speakers

Price  
Rs 19,995

**Package contents.** Squeezebox Boom network music player, AC adaptor, wireless infrared remote with battery, quick-start guide, and line-in cord for most iPod and other MP3 players with standard 3.5mm jack.

**Minimum system requirements to access music from the computer.**

The Squeezebox Boom works with most of the latest operating systems (Windows 7, XP, Vista; Macintosh OSX 10.3.5 or later; Linux/BSD/Solaris (Perl 5.8.3 or later)). A minimum of 256MB RAM and 80MB of free disk space are essential. The Ethernet or 802.11b/g wireless home network optimises the wireless network's speed and helps with a more secure connection. Broadband Internet connection required for Internet radio and music services.

(at the other end of the room) to rear surround speakers.

**Integrated home theatre systems with wireless speakers.** If you don't own a home theatre system and are contemplating to buy one, go for a fully integrated home theatre system with wireless rear speakers. It's usually cheaper and much easier to set up.

Panasonic's SC-PT875 home theatre system is one good example. It costs Rs 44,990 and is a combination of base unit

and speaker system (five speakers and one woofer). The base unit integrates DVD/CD player, iPod dock, USB, mic, FM tuner, DivX, etc. You can connect it to your LCD TV via the HDMI cable connection. A small wireless transmitter attached to it transmits the signals wirelessly to the rear speakers.

**Others.** What if the speakers are built right into the home theatre system? Of course, it would be more convenient. Philips HTS 8141 Sound-

Bar and MCD388 are examples of integrated home theatre systems with built-in speakers.

The HTS 8141 consists of a SoundBar box (which connects to the LCD TV via HDMI cable) and a subwoofer. The SoundBar box does away with the clutter by integrating speakers, FM tuner, and CD and DVD player. So it can play FM radio and all of your disks including CD, DVDs and USBs, while not requiring any separate speaker. You can also listen to the music stored on your iPod through iPod dock.

The SoundBar system has three auxiliary inputs. That means, you can connect it to your TV, laptop or some other external device. The SoundBar connects to the subwoofer via a cable.

The Philips HTS 8141 SoundBar costs Rs 60,000.

If you don't want to spend this much, Philips has 100W MCD 388 micro home theatre costing just Rs 16,990. It has an integrated wireless subwoofer and disk playback capability, but no auxiliary inputs. All you need to set up a home theatre system is just connect it to your LCD TV.

Logitech's Squeezebox Boom network music player too has built-in speakers. Apart from the power cord, this music player doesn't require any other cord to stream music from your computer around the house over wireless network. You could opt for a

## Wide portfolio, broad spectrum – your partner in T&M

### Audio analyzers

Universal instruments flexibly configurable for measurements on analog and digital interfaces

### Signal generators

Covering all instrument classes for digital, analog, baseband, RF and microwave applications

### Signal and spectrum analyzers

Largest product portfolio on the market from handheld to mid-range to the fastest and most exacting analyzers available
