Squeezebox Boom for each and every room of the house. As per your choice, you could sync the players to have the same song playing in each room or, alternatively, listen to different songs

in each room as you have a vast variety to choose from.

"The transmission of audio signals takes place through a Wi-Fi environment. This means that the source of

A fully integrated home theatre system with wireless rear speakers is usually cheaper and much easier to set up.

music needs to be Wi-Fi enabled in order for the music to be transferred to the Squeezebox," says Subrota Biswas, country manager, India & South West Asia, Logitech.

To set up the Squeezebox Boom, you need to select a location that is protected from moisture, extreme temperatures and away from direct sunlight. If you'll be connecting to your wireless network, you should choose a location that is in range of the nearest router or access point, and if you intend to connect via Ethernet, it should be near an Ethernet connection. The power supply uses a plug adaptor system for worldwide compatibility. Slide the plug adaptor into the power supply and make sure it snaps into place. Plug the barrel connector into the AC input on Squeezebox Boom's rear panel. Plug the power supply into an electrical outlet. Squeezebox Boom will automatically power on, display a welcome message and then display the setup menu. ●
