Since this information is subject to change, all those interested are advised to ascertain the details from the organisers before making any commitment.

now-Hewlett-Packard-owned Palm webOS.

Driving Linux on mobile will be the fact that each Linux distro uses the Linux kernel with a unified base of upstream components that developers, ISVs and hardware providers can tap.

## Quantum leap in solar PV installations in India

Industry leaders and experts from the solar PV industry say that the industry has seen more than 300 per cent growth in MW capacity of solar/PV installations in the last two years. A number of proposals for setting up large and small solar PV power plants have been submitted by public- and private-sector companies to achieve the 1100MW target of Phase I of the National Solar Mission (NSM).

Participants at an interactive panel discussion and curtain raiser for *SOLARCON India 2010*, a solar-energy-focused business and technology event, said that grid-connected solar/PV plants provide a clean platform to increase power production in the country.

Sathya Prasad, president of SEMI India, and convener, *SOLARCON India 2010*, said, "Recent policy and planning announcements and the launch of the NSM by the government of India suggest a clear recognition that PV will play an increasingly prominent role in India's energy strategy."

Large solar/PV power plants are just taking off with about 10 MW of current installed capacity.

## Government to encourage handset manufacturing

Handset companies may soon be asked to locally manufacture a certain percentage of their sales in India, as the Indian government is looking into the possibility of making it mandatory to manufacture them in the country.

Despite the fact that India is the fastest growing market for mobile telephony in the world, not many handset companies manufacture in the country. Even Indian companies such as Micromax, Spice, Karbonn,
