

Manage Your Office Productivity

with tools like *OxygenOffice Professional*, *PDFCreator*, *OpenProj*, *RedNotebook* and *GanttProject*

RedNotebook

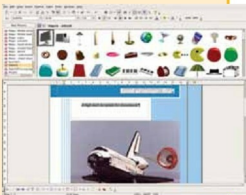

RedNotebook is a graphical diary and journal that helps you to keep track of your notes and thoughts. It includes calendar navigation, customisable templates for each day, export functionality and word clouds. You can also format, tag and search your entries. For more information, visit <http://rednotebook.sourceforge.net/>

OxygenOffice Professional

OxygenOffice Professional is an enhanced version of free OpenOffice.org.

This multi-platform office productivity suite contains more extras like templates, cliparts, samples, fonts and VBA support. For more information, visit <http://sourceforge.net/projects/ooop/>

OpenProj

OpenProj is an open source replacement for Microsoft Project.

It has equivalent functionality, a familiar user interface and even opens existing MSProject files. OpenProj is interoperable with Project, with a Gantt Chart and PERT chart. It is considered to be the best open source project management application. For more information, visit <http://openproj.org/>

PDFCreator

Using PDFCreator application, you can easily create PDFs from any Windows program. It can be used like a printer in any Windows application and can create PDFs from any program that is able to print. You can even digitally sign your PDFs to ensure that you are the author and the file has not been modified. It also allows you to merge multiple files into one PDF file. For more information, visit <http://sourceforge.net/projects/pdfcreator/OpenProj>

GanttProject

GanttProject is a cross-platform desktop application that helps you in project scheduling and management. It runs on Windows, Linux and Mac OSX. Also, it is free and its code is open-source. For more information, visit <http://ganttproject.biz/>
