STORAGE

32GB microSDHC card

Transcend Information has introduced what it claims to be the largest-ever 32GB microSDHC memory card for cellphones and other mobile devices.

The new microSDHC card is no bigger than a thumbnail and weighs less than a paper clip. Despite its tiny dimension, the card offers sufficient space to store up to 13,000 pictures (based on 5-megapixel JPEG compression format), 480 minutes of full HD video, hours of music or thousands of electronic texts.

Next-generation solidstate drive

Kingston Digital has announced the latest addition to its SSDNow V Series family of solidstate drives (SSDs). Designed for mainstream consumers, the V100 SSD is claimed to be the best performance enhancer and most cost-

effective upgrade path for desktops and notebooks, short of a total system replacement.

The V100 expands the V Series line with the addition of a 256GB capacity drive. Also available in 64GB and 128GB capacities, it has Windows 7 TRIM support and features an optimised controller and advanced NAND Flash technology for increased read and write performance. Consumers

looking to extend the life-cycle of their current system will notice quicker bootup and application load times as well as a faster overall user experience with the V100.

Moisture-proof flash drives

Simmtronics Semiconductors has launched the VM04L USB flash drives in India. According to the company, the drives are moisture-proof and compatible with all versions of Windows operating system (including ME, 2000, XP, Vista and 7). These are easy to carry and can be plugged directly into any USB2.0 port to transfer music, videos, photos or document files.

Available in six different storage capacities, the drives are priced at Rs 360 for 2GB, Rs 450 for 4GB, Rs 850 for 8GB and Rs 1600 for 16GB models.

POWER

DC power supplies

Tektronix has announced two additions to its line of bench instruments: the PWS4000 series programmable DC power supply and the PWS2000 series DC power supply. These power supplies smoothly integrate with other Tektronix bench instruments such as oscilloscopes and digital multimeters.

With wide current and voltage ranges, plus up to 0.1mA and 1mV resolution, engineers using the PWS2000 or PWS4000 series can pre-

cisely generate the power needed for a variety of applications. A numeric keypad for direct key-in entry and up to 40 user-defined setup memories make voltage and current selection fast and precise.

The PWS4000 series offers up to 72V output voltage with 0.03 per cent basic voltage accuracy and 0.05 per cent basic current accuracy. The PWS2000 series also provides up to 72V output voltage with 0.05 per cent basic voltage accuracy and 0.2 per cent basic current accuracy.

Solar power-conditioning unit

Su-Kam's solar power conditioning unit is a wholly integrated system consisting of a solar charge controller, inverter and grid charger. It gives the option of charging the battery bank either through solar input or from the diesel generator, depending upon the working conditions.

The unit continuously monitors the battery voltage, solar power output and the consumption loads. In case the battery voltage falls below the preset level, it automatically transfers the load to the grid or generator and also charges the batteries. Once the batteries are charged to the preset level, the unit cuts off the load from the grid or generator, reverts to feeding the load from the battery
