

Layout Design on Stripboards

Stripboard is a widely-used electronics prototyping board that is often referred to as veroboard. It has a grid of holes, connected in stripes on the reverse by lines of copper. Here are some commonly used software that can help you design layout on stripboards

■ NIRAJ SAHAY

In traditional PCB designing, copper tracks are made in accordance with the layout of the components. In other words, the components are placed first and then the connecting copper tracks made.

In contrast, while using a stripboard, you need to place components as per already available rows of conductive tracks and grid of holes. This task of placing components on a stripboard can be very confusing and make the layout a puzzle game.

Here are some commonly used software that can help you design layout on stripboards.

VeeCAD is a PCB layout application for design and layout of components on a stripboard.

What's Special?

VeeCAD takes a schematic-generated netlist from any popular PCB layout software and assists you in building a layout. It comes with usual designing tools such as netlist import, component footprint definition, component positioning, wiring and connectivity check. VeeCAD free version is a capable layout editor ready for hard work. It is file-compatible with the full version. VeeCAD has a good symbol library in both free and commercial versions. For more information, visit <http://veecad.com/>. *Distributor: VeeCAD does not have any distributor. It is sold online for \$26.26*

(per licence). A free-to-try version is also available for download from the website of the software.

Download URL: <http://veecad.com/downloads.html>

Platform Supported: Windows

It's an easy-to-use stripboard layout program.

What's Special?

VeroDes supports board sizes up to 70 holes by 70 tracks and allows you to view both sides of your circuit, with links, breaks and component pins clearly marked in either view. Though not a full-featured software, it is a good application to try for free.

Distributor: There is no distributor and the software can be downloaded freely from the website.

Platform Supported: Windows

LochMaster 4.0 is the latest version of the tool for creating stripboard projects.

What's Special?

LochMaster comes with functions like auto-generation of component lists, a connection test, and an editable library with a large number of symbols and

components. It allows you to design, document and test your stripboard projects. The new version also allows parallel usage of mm, inch and hole grids. It is compatible with all previous versions. So you can load and edit any project you have already designed with LochMaster.

Distributor: You can order this software on CD or download it from the website. Details about shipping and cost can be found at www.abacom-online.de/uk/html/bestellung.html

Home Page: www.abacom-online.de/uk/html/lochmaster.html

Download URL: www.abacom-online.de/uk/html/demoversionen.html

Platform Supported: Windows

It lets anyone to draw PCB and Stripboard layouts.

What's Special?

The software is platform-independent as it is developed in Java. It comes with an easy-to-use interface, and most of the operations can be performed using only the mouse. This version is highly flexible and has improved memory consumption compared to the previous versions.
