

ELCINA Directory 2010

This is the 23rd edition of a directory on the Indian electronics industry published by ELCINA Electronic Industries Association of India.

The directory is very useful for aspiring and existing players alike. It provides statistics on production, exports and imports of electronics and IT hardware, major policy changes since 2007, foreign trade policy for 2009-14, industrial policy and policy for investment, SEZ policy, union budget 2009-10, offset policy for defence procurement, an article on eco-design, listings of ELCINA members and product suppliers, key contacts and useful websites.

Principles of Electromagnetics

Written for undergraduate students of electronics and telecom engineering, this book provides a simple and logical representation of the basic concepts and principles of electromagnetic fields.

The book covers mathematical approach to electromagnetic field, differential and integral approach in electromagnetic theory, static electric field, steady electric current, energy and potential, static electric field in dielectrics, static magnetic field, magnetic materials, time-varying field and Maxwell's equations, and numerical electromagnetics and applications.

Also, it has appendices on key terms, formulae and MATLAB tools that are used in electromagnetics.

Vrt A...L: Volume-1a

This enlarged and updated edition is a comprehensive component information database for electronics engineers. It provides up-to-date information about transistors, thyristors, SMD codes, diodes and ICs. You will find such information as comparison tables, brief data and pin assignments of these components. In all, over 200,000 comparisons and equivalents are given.

Each type is provided with such information as the device family, short form describing the salient electrical data along with the dimensional outline, drawing, the manufacturer and pin assignment.
