

PowerLED Indoor Lights

- Extremely Low power consumption
- Long life (in excess of 50,000 hours)
- Models with light output to match conventional indoor lights
- No maintenance required : very low Lifetime Ownership Cost

PowerLED QR111
Recess Mount

6" PowerLED Downlighter
Recess Mount

2x2' and 1x1' PowerLED Luminaires
Recess Mount

Universal 12-PowerLED Strip Light
Replacement for ETL

PowerLED MR-16 Spot
Swivel Mount, Halogen replacement

PowerLED Downlight Light
Recess Mount

BINAY - Lighting Up The Future

binay opto electronics private ltd.

44, Armenian Street, Kolkata-700 001, India
Tel : (033) 2242 9082, 2210 3807, 2210 2039
Fax : 91-33-2242 1493, Website : www.binayLED.com
email : info@binayLED.com, binay@vsnl.com

INVENTING NEW TECHNIQUES OF PRODUCING LIGHT

STMicroelectronics' dSPIN motor-control system on a chip

electronic circuitry for controlling stepper motors using an advanced BCD fabrication process. It is the first device in ST's new dSPIN family of monolithic motor-control ICs that will bypass specialised hardware and software design tasks, reduce component count and PC-board area, and speed up time to market. Implementing the motor-control calculations in hardware simplifies software design by requiring only acceleration, deceleration, speed and target position commands from the application microcontroller. This frees microcontroller resources to support other differentiating features.

In addition to increasing integration over competing solutions, the dSPIN ensures extremely smooth movement of the motor by using an innovative voltage-mode control algorithm.

Versatile 32-bit microcontrollers for automobiles

To meet the automotive industry's ever-increasing need for processing performance and integration, Freescale Semiconductor has announced its next-generation 32-bit microcontroller units (MCUs). The Qorivva MCU families are based on Power Architecture technology and built using a 55nm non-volatile memory process for improved power efficiency and cost-effectiveness. These range from simple, low-cost, single-core controllers up to the latest triple- and quad-core variants, providing increased performance, security and safety for the latest vehicle applications.

The MCUs feature leading-edge integration and performance capabilities, including configurable peripheral sets such as flexible timers and motor control systems. Digital signal processing capabilities provide additional functionality. Increased processing speeds allow more complex control algorithms and features. Increased on-chip memory content (flash and RAM) significantly reduces the need for off-chip memory.

The Qorivva MCU families are planned for availability in early 2012.
