

people, technologies and training. So the leader needs to be an influencer as the budget will be an important attribute in the process.

Tip #9: Be patient and think for long term

The transition phase is very critical as it leads to doubts and negativity. However, one has to realise that transition to model-based design is not a three-month or six-month project. Transitioning is required in the entire work process, products, designers' approach and evaluation metric, which may take years before return on investment is achieved. Transition is a gradual process and its advantage can be felt only with time.

Medium to large organisations involved in design and development for transportation, construction equipment, automation, or aerospace and defence industry may take much longer to completely change the approach from their legacy systems and

processes to model-based approach. Again, one needs to carefully choose the sequence of operations while deploying model-based design.

Tip #10: Leverage the experience of tools provider

Tools play a critical role in every step of adopting model-based techniques. These need to be accommodated at the very beginning to be in sync with the changeover. Tool providers accumulate experience from a variety of circumstances and changes. Their experience can benefit the organisation to reduce the steepness of the learning curve, time and capital involved in training for the competencies.

Partnering closely with tool suppliers allows you to leverage their experiences, avoid pitfalls, and go through an easy and successful transition.

For a successful model-based transition...

Model-based design is a highly sophis-

ticated and refined practice for embedded systems and design organisations. The benefits and long-term vision are proven, well-established and documented for an organisation to adopt it. Adopting a new work process can be a cultural challenge for a firm, but you soon start realising its benefits in every step of the change. The change thus needs to be driven by some planning and strategies with clearly defined goal.

The tips shared by Mulpur and Rao are documented in detail in a paper titled *Best Practices For Establishing Model-Based Design Culture*. As said, smart organisations learn from their own mistakes, but wiser ones learn from others' mistakes. These tips were formulated over many years by carefully observing and participating in many transitions and may not be equally applicable in all situations. ●

The Latest Test & Measurement Equipment At One Place

From hand-held meters to high-end equipment—if it's T&M, it will be here.

Electronics

ForYou expo

2011

Innovate. Design. Manufacture. Source. | 17 to 19 February, 2011
Pragati Maidan, New Delhi

To Exhibit
Call: 09313843924
09873131699
09312888878

From hand-held multimeters to GHz oscilloscopes...

- Oscilloscopes
- Multimeters
- Signal Generators
- Function Generators
- Multifunction Meters
- LCR meters
- Signal Analysers
- Network Analysers
- Spectrum analysers
- Power meters
- And more...

Block your calendar to ensure that you're there for this mega event.

Presented by 	Knowledge & Exhibition Partner 	Supporting Associations     	
Knowledge Partner 	Media Partners     	Industrial Products Finder 	

To Exhibit call Tanmay (09313843924), Subhashish (09873131699), or Nidhi (09312888878)

To register visit EFYExpo.com or call Ms Sonali at 011-26810601 or email: efyeng@efyindia.com

KEY FACTS

Dates: 17th to 19th February, 2011
Hours: 10:00 to 18:00
Venue: Hall No. 2, 3, 4, 5 and 6
Pragati Maidan, New Delhi

www.efyexpo.com
