

AMAZING GADGETS FOR YOU

If you are crazy about gadgets, here are some cool new electronic products that you would really die for, for they have something exciting to offer

■ UMA BANSAL

CAMERA

Fujifilm REAL 3D W3

Price
₹ 27,999

Shoot 3-D images and high-quality 3-D HD movies

FUJIFILM, which brought to India world's first 3-D digital camera (FinePix REAL 3D W1) in August 2009, has added a new model to its cutting-edge 3-D range.

Fujifilm REAL 3D W3, with its new 3-D auto mode, makes it easy to create your own 3-D images and shoot advanced, high-quality 3-D HD movies. What's more, with its stereo sound recording, you can record audio for your movies that gives them stunning immediacy and realism. You can play your movies/photos and also view live 3-D images during shooting on the camera's generous 8.89cm LCD monitor without having to put on special 3-D glasses.

Re-live your cherished memories in true-to-life 3-D by playing them on a 3-D HD TV. Just connect the camera to any 3-D TV with an HDMI cable to watch your movies on the big screen in amazing 3-D (you'll need the special 3-D glasses that come with your TV to see it). Connecting the camera to a 3-D TV via an HDMI cable provides a simple and straightforward way to view 3-D HD movies and high-resolution still images.

GAMING

Microsoft Kinect for Xbox 360

You are the controller. No gadgets, no gizmos, just you!

Price:
Approx. ₹ 9990
(For Kinect sensor and Kinect Adventures for Xbox 360)

Whether you're a gamer or not, now anyone can play and have a blast. Microsoft's Kinect add-on for its Xbox 360 gaming console brings games and entertainment to life without using a controller. Controller-free gaming means full body play. Kinect

responds to how you move. So if you have to kick, then kick. If you have to jump, then jump. You already know how to play. All you have to do now is to get off the couch.

Kinect uses a motion sensor that tracks your entire body. So when you play, it's not only about your hands and wrists. It's about all of you. Four strategically placed microphones within the sensor recognise and separate your voice from the other noises in the room, so you can control movies and more with your voice.

You need to set the sensor 0.6-1.8 metres (2-6 feet) off the floor and centered with your TV. Make sure there's no direct sunlight on the sensor or you. And don't place it on your TV or Xbox 360 console, in front of speakers or near things that vibrate or make noise.
