

NOTEBOOK

Hi-Tech's eDiary (Electronic Diary)

Good for you if you love writing instead of typing but want the information to be stored digitally

Price
₹ 9350

Get freedom from lugging around heavy laptops. Hi-Tech Solutions has launched an electronic diary that is nothing but a simple and sleek notebook that frees the users to write normally (on any paper of his choice) and still be able to store the information digitally. Costing as little as a mid-end cellphone, it does away with the need for typing or looking for a source to charge the laptop.

The eDiary comes with a standard B5-sized paper notebook fitted with a small base unit placed on the top-margin and a special electronic pen (e-Pen). The ePen functions as any normal writing instrument with a normal changeable refill and has additional electronics that works with the base unit to capture the hand-writing strokes. The built-in memory of eDiary can save up to 100 pages of written notes at a time, which can later be downloaded to a PC with the help of USB cable. Weighing only 40 gm more than a regular diary of similar size, it is easy to carry in a handbag, knapsack or briefcase.

Software application provided with the eDiary organises notes and, if required, converts the handwritten notes into normal computer text. You can search files by name, date and even search a specific word within notes.

TV TUNER

Techcom's SSD TV 817 USB TV Stick

Transform your laptop into a TV with this plug-n-play USB TV stick

Price
₹ 1175

You might mistake Techcom's SSD TV 817 USB TV stick for a pen drive by its looks, but it is actually a powerful external TV tuner that transforms your PC/laptop into a TV by simple plug-and-play method. This portable device supports worldwide TV receiving via PAL, NTSC and SECAM platforms. It also comes with video capture function to record and save your favourite programmes and with FM radio receiver to let you enjoy FM radio through your computer. The time-shifting recording function enables you to rewind and fast-forward live TV shows.

Scheduled TV recording function helps you to save your favourite TV programmes directly to your hard disk drive. The SSD TV 817 USB TV Stick also supports stereo function and comes with a fully functional remote control for ease of operation, 1-4 multicable, quick installation guide and software CD.

It also enables still image snapshot whereby you can capture still images from programmes and save them to BMP files in your computer. Powered by USB bus, it requires no extra power adaptor. The device is fully compatible with Windows 7.
