

Unetbootin (Utilities, 4.09 MB)

Unetbootin is an open source software that can be used to create bootable live USB drives for a variety of Linux distributions from Windows or Vista, without requiring to burn a CD. The software can be used to create a live USB drive or a 'frugal install' on your local hard disk if you don't have a USB drive. The software supports Ubuntu, Fedora, Debian, openSUSE, Gentoo, Slax and many other operating systems. It can also be used to load various system utilities like Parted Magic and SystemRescueCD. The minimum requirement is Windows 2000 through Windows 7 or Linux.

Sunbird (Utilities, 4.98 MB)

This free and open source software is developed by the Mozilla Foundation, Sun Micro System and many others. It is a cross-platform calendar that is based on Mozilla XUL user interface language. The goal of the software is to build an alternative to Microsoft proprietary software and has a full-featured and easy-to-use calendar application that can be used on any system. The software gives you various options to maintain your daily, weekly or monthly tasks. The graphics are really amazing. Sunbird is licenced under MPL/GPL/LGPL.

Nuclear-bike 2 (Fun, 10.8 MB)

Nuclear bike 2 is a continuation of its earlier series, Nuclear bike. Now, this game is even more exciting with great new background and graphics. The game has 15 levels that you need to clear in order to complete the game. It starts with an easy level and as the game progresses, the levels get tougher. It is a flash-based game and its one demerit is the background music. Although you have an option to switch the music off, a racing game without sound is dumb. The minimum system requirement for this game is Windows XP/Vista with minimum 500 MHz and 128MB RAM.
