

```

" No of Votes: " & t1 & " **",
vbOKOnly, "POLL RESULT"
i = i + 1
Adodcl.Recordset.MoveNext
Wend

'Clearing voters status
Adodcl.RecordSource = "select * from
elroll"
Adodcl.Refresh
Adodcl.Recordset.MoveFirst
While Adodcl.Recordset.EOF = False
If Adodcl.Recordset.
Fields("votestatus") = True Then
Adodcl.Recordset.Fields
("votestatus") = False
End If
Adodcl.Recordset.MoveNext
Wend
'clears polling station data
clearPSdata
MsgBox "POLL DATA
CLEARED",
vbExclamation
EXITBTN.Enabled = True
End Sub

```

Clicking 'stop poll' button closes the poll process completely and the data is saved with a special field value in "poll conducted." The value is 'true' for true poll and 'false' for mock poll:

```

Private Sub STOPPOLL_
Click()
clearfields
savePSdata
KBDFrame.Enabled = False
PHOTOFrame.Enabled = False
STOPPOLL.Enabled = False
BUFrame.Enabled = False
If NORPOLL = False Then
RESULTS.Enabled = True
Else
EXITBTN.Enabled = True
End If
End Sub

```

The remaining code is self-explanatory

and does not need much explanation.

Program testing

The program testing is straightforward. A few buttons are enabled or disabled according to steps needed to conduct the polls.

To allow voting, enable 'start poll' option. If poll has already been conducted, disable 'start poll' option in the program so that it displays results only. This is essential as per actual polling conducted by the Election Commission.

Note. The special ID numbers are stored in 'elroll' table of the VMdata.mdb database file. The special ID numbers used in this project are listed below:

Voter Sr No.	Special ID No.
1	1111
2	222
3	33
4	4

For the fresh poll, proceed as follows:

1. Click 'power on' button
2. Select 'mock poll' or 'true poll'
3. Click 'start poll'
4. Enter the voter's serial number (SNO) from the keyboard on the control unit by clicking the number keys. Once the serial number is entered, click 'Ok.' It will display the voter's ID number followed by "Allow special ID check" message
5. Let the voter enter his special identification number. If the number is correct, a message will be displayed to allow voting. The voter can click the arrow corresponding to the party symbol to cast his vote. The vote is registered by showing boundary of the party symbol in red colour and message "Vote registered." Click 'CL' button to clear all the numbers and photo for the next voter

6. Repeat steps 4 and 5 until voting completes

7. Click 'total' button to display total votes at any time of polling

8. To stop polling, click 'stop poll'

9. If 'mock poll' is selected in step 2, 'result' button is activated. Clicking it displays the result of each candidate one by one. While displaying result, the screen shows message "Do you want to clear results?" If you select 'yes' option, mock-poll results are cleared. Unless you clear the results, the 'exit' button will not be activated. Therefore clear the results to end the program. Click 'exit' button to exit the program

10. If true poll is selected in step 2, the 'result' button is disabled and 'exit' button is directly enabled. You can display the total voting by clicking 'total' button or end the program by clicking 'exit'

Once the program is closed, re-run it to display true-poll results. When you click 'power on,' message "True poll conducted" is displayed. Here, only 'result' and 'total' buttons are enabled

If you click 'result,' a message pops up for displaying and clearing the results. If 'yes' is selected, it asks password of the returning officer in order to protect the results from unauthorised persons. Here, the password is 'RTOFFICER.' When you type correct password, the results are displayed candidate-wise.

If you click 'total,' the total voting result is displayed.

You can end the program by clicking 'exit' button.

EFY note. All the relevant codes of this article have been included in this month's EFY-CD. ●
