TEST & MEASUREMENT

Core network test platform

Tektronix Communications has unveiled the Spectra2 core network test platform for the Spectra2 protocol test product line. Built on an Intel dual quad-core processing architecture, Spectra2 allows network equipment

manufacturers and telecom operators to test NGN, VoIP and converged networks for functionality, conformance, performance and media quality—all from a single, high-capacity, multi-user test platform. It offers a low-cost footprint supporting IP and TDM interfaces for signaling and media.

Infrared proximity sensor and ambient light sensor

Silicon Labs' QuickSense Si1120 sensor enables an electronic device to quickly gauge its proximity to the user. For example, it can detect whether a handset is near a user's face and adjust the display and lighting accordingly. The Si1120 can also detect ambient light

QuickSense™ Infrared and Touch Sense Solutions

in the external environment, allowing screen backlighting to be dimmed to save power. When paired with the F700 and F800 touch-sense micro-controllers, it enables smart motion sensing.

The Si1120 has a sensing range of up to 50 cm with a single pulse. Sensing modes are configurable for range optimisation.

5-in-1 indicator

Countronics has introduced a benchtop indicator that can display pH, oxidation reduction potential, conductivity, total dissolved solid and temperature.

The indicator features pH display with 0.01pH resolution, auto buffer recognition with two-point calibration for pH, auto/manual temperature compensation selectable for both pH and conductivity, four-step range selection (0.1 μ S to 199.9 mS for conductivity), cell factor selectable for both 1.0 and 0.1, digital calibration for conductivity, auto temperature compensation using PT100 sensor, one-touch switching between conductivity and pH display selections and a large alphanumeric LCD with bright backlight.

COMPUTING

DirectX 11-capable graphics card

AMD has introduced the ATI Radeon HD 5670 graphics card—the latest addition to its line-up of the world's first and only graphics products to fully support Microsoft DirectX 11

gaming and computing, as well as new innovations such as ATI Eyefinity technology. Priced at less than \$100, the card enables a superior HD gaming experience in the latest DirectX 11 titles, employs ATI Stream technology to boost performance in video playback and productivity applications, and helps enable the full Microsoft Windows 7 experience. It delivers up to 620 gigaflops of computing power and GDDR5 memory.

24GB tripple-channel memory kits

Users of the Intel Core i7 and X58 platforms can now take their systems to the memory extreme with Kingston's 1600MHz 24GB HyperX DDR3 memory kit made up of six 4GB modules. For Core i5 P55 chipset enthusiasts, Kingston has released a 1600MHz 16GB kit of four 4GB modules to take full advantage of dual-channel performance. Users working with the latest operating systems like 64-bit Windows 7 can keep multiple programs open,
