Motherboards for HD multimedia

GIGABYTE Technology has announced H55/H57 series motherboards based on Intel's H55 and H57 chipsets and its Ultra Durable 3 design featuring 2x copper PCB. Cutting-edge features of the motherboards include innovative Smart6 PC management tools, Dynamic Energy Saver 2 power saving utilities, DualBIOS and support for Energy Using Products Directive (EuP), for a powerful, yet power-efficient multimedia platform.

Featuring next-generation storage capabilities including USB 3.0 and high-performance digital DisplayPort connectivity, as well as GIGABYTE's own 3x USB power boost, the GA-H57M-USB3 and GA-H55M-USB3 motherboards provide a compelling solution for users wanting the ultimate multimedia system.

CPU cooler for Intel processor

GlacialTech has launched GlacialStars IceHut 7224 CPU cooler for Intel processor. The cooler is targeted at performance desktops and comes with support for Intel socket. GlacialStars uses nano-scale macromolecule and super metal-oxide compounds to

keep the processor cool. This combination promotes high thermal conductivity, low bleed charac-

teristics and high temperature stability of the cooler.

STORAGE

High-speed SDHC cards

Transcend Information has launched Class 10 SDHC cards. Part of its 'Ultimate' line of powerful high-speed memory cards, the new cards outperform current Class 6 cards, with enhanced transfer speeds of 20 MB/s and massive storage capacity of up to 16 GB. Their blazing fast performance is tailored specifically for high-speed consecutive shooting as well as smooth HD video recording.

Compared to Class 2 cards that guarantee write speeds of only 2 MB/s, or Class 6 versions that start at 6 MB/s, the Class 10 cards allow 16MB/s write and 20MB/s read speeds that help process data quickly and prevent lag when recording 1920x1080 full-HD videos at 60 fps.

Fingerprint-encrypted USB

Ritech has launched a fingerprint-encrypted USB called 'Signature Lite.' The USB features dual fingerprint authentication, 128-bit hardware crypto-engine AES, embedded read/write protection (optional) and additional security software. Dual fingerprint authentication prevents access from the outside into the secured non-volatile internal memory storage. It also steps up security a notch as a second fingerprint is required to be verified. The crypto engine encrypts and decrypts data on the fly during data transfer between the computer and Signature Lite.

PC backup appliance

Seagate has introduced a backup appliance that eliminates the need to manually learn, manage or dedicate any time to the backup process. Unlike most backup utilities, the Seagate Replica backup appliance automatically and continuously stores up-to-date copies of everything on a PC, including installed applications, operating system, e-mail, pictures, music, movies, Internet bookmarks and settings.

With the Replica solution, there is no need to spend time rifling through countless files, photos and folders to determine what has been or still needs to be saved; simply connect a single USB cable, click 'ok' to the software licence and the entire PC is backed up. After this simple action of accepting the software licence, the Replica system

continues to run behind the scenes, so no further interaction with the application is required. Additionally, when the Replica backup appliance is left connected to the computer, it performs a continuous and complete backup of everything so the computer is not left vulnerable between backup events as it would be with scheduled software.

A single-PC version of the Seagate Replica for use with individual laptop or desktop computers is available for about Rs 9000 inclusive of taxes.
