

nology for televisions that is claimed to offer the ultimate combination of picture quality, energy efficiency and manufacturing simplicity to give viewers a perfect picture.

Prysm claims that a laser phosphor display consumes a fourth of the power of a liquid crystal display with the same brightness and about one-tenth of the power of a plasma screen. It is initially targeting the consumer display market, and says the first product will be announced in the coming months.

Power your Nokia phone from a can of coke

Now you can charge your mobile phone wherever you go, but just remember to take a Coca-Cola can with you! Chinese developer Daizi Zheng has come up with a concept Nokia phone that is powered by Coca-Cola.

The phone has been developed as part of an eco-project to minimise the effect caused by conventional batteries that are expensive and hurt the environment at the time of disposal. The Nokia cylindrical mobile phone will be powered by a bio-battery that will generate electricity from sugar through the use of enzymes and last four times longer than traditional batteries.

Breath-controlled cellphone

Answer calls by blowing on your mobile handset. Named Sensawaft, this technology has been developed by

ZOMM is the world's first wireless leash for Bluetooth-enabled mobile phones

Zyxio and relies on tiny micro-electro-mechanical system (MEMS) chips that can be implanted in devices like hands-free mobile phone headsets.

The headset, resembling a Bluetooth hands-free device, contains four small sensors. To move the cursor across the screen, users need to move their breath from right to left or up

and down, as if they were blowing a tiny imaginary ping-pong ball across a table.

Don't leave me, cries your phone!

If you're scared of losing your expensive phone, here is some good news for you. Laurie Penix, together with her husband Henry, has developed a solution that could help in reducing the number of handsets being lost or stolen. Winner of the 'The Best of Innovations Award' at 2010 International CES, Zomm is a wireless leash for any Bluetooth-enabled phone that sounds an alarm if you walk away from your mobile phone, notifying you to turn around.

The device also features call notification with speakerphone, a panic alarm and a feature that allows you to call emergency assistance from anywhere in the world with just one press of a button, says Henry Penix, co-founder, ZOMM. With its speakerphone capabilities, you can speak to emergency personnel without ever touching your mobile phone.

Wide portfolio, broad spectrum – your partner in T&M

Audio analyzers

Universal instruments flexibly configurable for measurements on analog and digital interfaces

Signal generators

Covering all instrument classes for digital, analog, baseband, RF and microwave applications

Signal and spectrum analyzers

Largest product portfolio on the market from handheld to mid-range to the fastest and most exacting analyzers available
