

Mini projector with virtual touch screen

An English start-up firm Light Blue Optics has introduced an interactive

Light Touch mini projector

projector that can display an image on a flat surface and let it function as a touch screen. The Light Touch is about the size of a paperback book which using holographic laser projection technology projects a display of up to 25.4cm (10-inch) diagonal size. You can control the projector and interact with multimedia content and applications using an infrared touch sensing system that transforms the projected image into a virtual touch screen.

Voice translation application for mobile phones

Ever faced difficulty in understanding foreign languages while travelling abroad? You have a reason to cheer: Toshiba plans to build up an instant voice translation software that will make your mobile phone translate basic sentences. The translation software, which is in the offing, can currently interpret between English, Chinese and Japanese.

Laptop made from recycled CDs

The world leaders at Copenhagen might have failed to draw any solution to overcome threats posed by global warming, but realising the need for green products Sony has launched what could be regarded as a true green netbook at the *Consumer Electronics*

Show. Twenty-three per cent of its W series 'eco-friendly' netbook has been made of recycled CDs, with carrying case made of recycled plastic bottles. The netbook has a 25.4cm LED-lit screen and runs on Windows 7 Starter.

3D camera

FUJIFILM's revolutionary 3D camera, FinePix REAL 3D W1, achieves a 3D image by flawlessly layering together two images. It is also capable of 3x optical zoom, which is deemed difficult to achieve in 3D photography because of the precision required to align two lenses. Moreover, the engine of the camera synchronises data passed to it by the two lenses and two CCD sensors, to determine shooting conditions such as focus, brightness and tonality and instantaneously blend this information into a single symmetrical image.

In the 'individual shutter 3D shooting' mode, the camera takes two shots, one after the other, and saves a single 3D image in the camera manually. The 3D image generated can be edited, which is particularly useful for landscape photography where a 3D image is difficult to achieve, or conversely, macro shots, where the 3D effect can be too strong.

New technology for chip security

Cloning, tampering, theft-of-service and reverse engineering of chips and systems will now be a thing of the past, with NXP's hardware-intrinsic

security (HIS) technology for securing key storage.

The semiconductor company has licenced embedded security IP from Intrinsic-ID, which it claims will allow it to stay in the forefront of security for eGovernance products, conditional access management systems for pay TV, and authentication solutions for electronic devices and peripherals. The technology, called Quiddikey, allows a device to generate a secret key only when needed and power down with no key present.

Biggest, highest-performance FPGA

Xilinx claims to have launched the industry's largest FPGA with immediate design tool support. The Virtex-6 LX760 device enables Xilinx

customers who need raw logic density and industry-leading input/output (I/O) performance to get started on their projects using the Xilinx ISE Design Suite 11.4. The Virtex-6 LX760 device

offers more than two-and-a-half times the density of the largest Virtex-5 device. It is ideal for any application that requires intensive computational performance and high logic density. For example, the device enables designers to use a single FPGA to prototype or emulate a greater range of ASIC designs than ever before. In addition to high logic capacity, it offers a higher I/O count than competing FPGAs to simplify the challenge of partitioning a large ASIC netlist across multiple FPGAs. Meanwhile, the ISE Design Suite version 11.4 reduces compile time by 30 per cent to enable large, complex and highly utilised Virtex-6 designs as well as increased productivity through more design turns per day.
