

USB Host Audio Decoder ICs

BU9457KV / BU9458KV

Easy-to-use USB Audio ICs with System Controller

Product Outline

ROHM USB host audio controllers integrate USB memory/SD card host audio and system controllers on a single chip. The units feature automotive-grade reliability and enable setting using simple commands from a microcontroller, reducing the number of external components for increased space savings and lower costs.

■ USB/SD music playback using a single chip

The integrated system controller eliminates the need for complicated software development and control. Operation is possible using simple commands from a microcontroller. ROHM's novel single-chip configuration that combines a controller and audio decoder and utilizes commands from a CPU greatly simplifies design compared with conventional 2- and 3-chip systems by reducing the number of external components.

Block Diagram

Compatible Formats

Part No.	USB	SD	mp3	WMA ¹	AAC	FF/FR Playback
BU9457KV	○	○	○	—	—	○
BU9458KV	○	○	○	○	○	○

¹: Windows Media™ is a registered trademark of Microsoft Corporation in the US and abroad.

■ Exceeds automotive specifications for reliability

Both the BU9457KV and BU9458KV meet or exceed the most stringent requirements for ESD resistance: +6000V at the USB terminal, 15kV against proximity (air) discharge (when used in conjunction with an external Zener diode), and 8kV against direct (contact) discharge, providing superior strength against surge noise, resulting in unsurpassed reliability.

USB Cable Direct (Contact) Surge Characteristics

Dimensions

VQFP64
 12x12mm
 H=1.6mm Max.

(Unit: mm)

General Purpose ICs
 Video and Imaging ICs
 Audio ICs
 IT Equipment ICs
 Consumer Product ICs
 Automotive ICs
 Discrete Semiconductors
 Passive Components
 Optoelectronics Modules

ROHM Semiconductor
