

BINAY- Lighting Up The Future

BINAY LED

Aviation Obstruction Lights for:

- Industrial Chimneys
- Radio, TV and Structural Towers
- High-rise Buildings & Structures
- Airports and Airfields

Available In Low Intensity and Medium Intensity Versions (as per the International Civil Aviation Organization guidelines), BINAYs PATENTED LED Aviation Lights come with a 5-year Warranty.

BENEFITS

- Rt-and-forget maintenance-free operation
- Long life of 100,000 hours (20 years at 12 hours daily burning)
- Shock-proof and vibration-resistant

THE BINAY LED OBSTRUCTION LIGHT IS UNDER ACCEPTED PATENT, AND AS SUCH IS A PROPRIETARY PRODUCT

binay opto electronics private ltd.
44, Armenian Street, Calcutta 700 001
Telephone: (033) 2242 9082, 2210 2039 / 3807
Email: info@binayLED.com; binay@vsnl.com
Fax: 91-33-2242 1493 http://www.binayLED.com

DIGITAL LIQUID LEVEL MONITOR

3 1/2 Digit (1999) Display with 1 CM Resolution

With innovative PIEZO-RESISTIVE Linear Sensor:

- No Moving part (No wear & tear and jamming)
- No Electrical Contact with water
- No Long-term effect of salinity on sensor

Principle:

The liquid pressure at the bottom, which is directly proportional to the liquid column height, is sensed using Media Compatible Piezo-Resistive sensor.

Features:

- Suitable for ANY FreeFlowing Liquid
- **Unit-options:**
Any Two of Cm, Ltr / KLtr, % (Percent)
- **Resolution:**
0.1 for % and 1 Cm upto 20 M Deep Tank
- **Datum:** Level adjustable
- **Power Requirement:** 10-14 VDC (5W)
- **Liquid Temperature:** 0-60 °C (Non-Freezing)
- **DC OutPut:** Proportional to Liquid Column Height

Cheap imports make it impossible for local manufacturing to flourish

Rajoo Goel, secretary general, ELCINA Electronic Industries Association of India, points out some specific challenges related to policy and high costs faced by the industry. The irony of the situation is that "the higher the value addition, the higher the disability faced by manufacturers." Fiscal and physical disabilities discourage capital-intensive, high-value-addition investments. ELCINA estimates that component manufacturing, which entails high value addition of 40-50 per cent, suffers 7-8 per cent disability costs, due to which investments have been extremely sluggish and inadequate.

Absence of a level-playing field is discouraging fresh investments in manufacture of components/parts that require high and long-term investments. "These issues become critical in a zero-duty regime where imports are cheap, making it impossible for local manufacturing to flourish," emphasises Goel.

Goel recommends zero duty on all inputs for manufacturing of electronic components and parts, including dual-use inputs, in order to avoid inverted duty. He supports implementation of goods and services tax (GST) with effect from April; 12 per cent GST (8 per cent excise + 4 per cent VAT) on electronics value chain, especially components, parts and assemblies. In case of any delay in implementing GST, he suggests zero CST. "Retaining 8 per cent excise duty is a positive step by the government and should be continued till GST is rolled out," adds Goel. He also stresses on abolishing 4 per cent SAD. If it cannot be abolished, it should not be refundable on imports of finished equipment or for imports by traders.

To encourage local manufacturing, Goel recommends that imports of finished electronic equipment should be dutiable and SEZ units should be allowed to sell in DTA on duty foregone concept.

Also, we need a policy for encouraging local manufacturing of such products as CFLs, solar lights and mobile accessories (chargers). These simple products are required in large quantity and have high employment potential.

Solar sector needs special attention

Gurjit S. Barara, president, Punj Lloyd Delta Renewables, points out that solar power being a greenfield project, the government should remove VAT and CST on sales of solar products. He justifies his view by arguing that on one hand the government is offering subsidy while on the other it is imposing tax. This disparity needs to be rationalised by removing taxes.

Barara hopes that depreciation will attract investment as well as increase usage in this sector.
