

Tips From Industry Experts

"Choose an Internet home monitoring camera that uses non-proprietary components which can work with industry standards like Wi-Fi. In order to get the right camera for your home, look at your own situation, identify why and where you will need the camera, and determine your camera requirements."—**Suresh Balasubramanian, national sales director, Cisco Consumer Products**

"Consumers should first identify their user applications, the user base and their work habits before buying these security products; else, they risk their investments which were done simply to follow others. In such cases, re-investments into correct technologies later become difficult and the consumers end up wasting crucial time, energy and money before acquiring correct solutions."

—**Sanjay Srivastava, manager- sales and marketing, Fujitsu**

"While reviewing a security solution for a home, office or an automobile, a buyer should look for ease of installation and use as well as reliable after-sales service and support. Good image quality is also an imperative for surveillance cameras so as to yield the desired results when an incident like a break-in is recorded. Easily enabled remote access to the video footage of the area under surveillance is also important as people would want to be able to monitor developments from a remote location."—**Prakash Prabhu, country manager, Axis Communications**

"The buyer should first assess his assets to be secured, then depending upon his budget look for the best available product in the market which suits his specific needs."—**Sanjeev Sehgal, managing director and founder, Sparsh**

emergency numbers.

You also need to figure out whether you want a wired or wireless system. There are many advantages of wireless over wired but wireless systems are a little expensive. For a wireless system, you don't have to do any wiring and therefore there is less damage to walls. Also, wireless devices are easier to install.

Next, ascertain whether you want video surveillance or not. Though video surveillance will add to the cost of the system, it is recommended as it lets you see the intruder. With remote access to video surveillance, you can keep track of what is happening at your home.

Office environments can be safeguarded by using a proper mix of different security products, such as a biometric device, cameras and alarms at various places, and security software (to protect systems from malware and viruses).

When buying a security system for an automobile, look at its features and cost compared to the vehicle's cost. For bikes, there are intruder alarm systems to protect from theft. For a four-wheeler, look for a central locking system, intrusion detection and GSM-/GPRS-based car location. ●

Caddo[®]
Testing Solutions for Everyone

Your Best Choice for Electronics Lab

Caddo 820 is a Universal Instrument for all Basic Electronics, Electrical & Instrumentation Laboratories. It has multiple instruments like Oscilloscope, Function Generator and DC Power Supply in a single space saving housing. The Caddo 820 forms an independent Test Lab for many applications.

20MHz Oscilloscope, Function Generator, Power Supply

Caddo 820 Features

- 2 Channel Oscilloscope - 40 MHz Trigger Bandwidth
- 1 MHz Function Generator - Sine, Square, Triangle, DC outputs • DC Power Supply $\pm 12\text{V}$ & 5V • Component & Continuity Tester • Microcontroller based design • 16x2 Alpha numeric LCD with backlight • Alternate Triggering
- Gold Plated BNC Connectors • Economical & Space Saving • 3 Year Warranty

New Launch

Data Logger Features

- 4 Analog Input with 0 to 10V • 2 Analog Output with 0 to 5V
- Multifunction Board to Control applications from PC using USB • User Friendly Software • Low Cost

Scientech Technologies Pvt. Ltd.

94, Electronic Complex, Pardesipura
