

Security For You

Some innovative security solutions that are available in India

Number plate reader designed in India

Sparsh has introduced an innovative camera that can read the number plate of any vehicle in adverse conditions. Usually, during night, a number plate is not visible due to bad light or too much exposure to light coming from the headlight, and during daytime, reflection from the number plate makes it difficult to read the number. Hence it is not possible for a CCTV camera to capture the image of the number plate. This camera overcomes this problem by compensating for the light coming from the vehicle with infrared light generated by built-in IR LEDs.

This NPR camera is claimed to have been designed using the best CCTV components available today: Sony Super HAD/Super HAD-II CCD and DSP chip with S/N ratio of over 52 dB. It can read number plates from a

distance of up to 10 metres. Moreover, it is waterproof.

Cost: Rs 14,450

High-resolution DVR

TAB Technologies has a unique DVR for CCTVs that supports Hindi language and has four times higher resolution (720x526 pixels) than its counterparts available in the market. TAB Technologies manufactures DVR systems in India for all sorts of CCTVs. It has various models, which feature real-time Linux operating system, USB port for taking backup of the

recorded data, IR-based remote control, USB memory stick, network interface RJ45, and support for CD/DVD backup and password protection. The model TTSS-400AD is claimed to be the first Indian DVR that supports Hindi language. Further, it supports 4-channel audio and mouse. Other features include true duplex functionality, that is, it can record and play at the same time. The device further supports recording and compression of video signals in real time.
