Electric fence security system

Jaypetex Engineering offers an electric fence security system for homes and offices. The system prevents unwanted entry. It consists of three parts: control, energiser and the fence connected to these. The energiser has an LCD voltage display, designed to pass IEC80335.2.76 and EMC standards. The entire module is connected to a 230V, single-phase power supply. So whenever someone touches the fence, an alarm sounds to indicate illegal entry inside the compound. The fence has a charge of 10 kV.

Cost: The electric fence systems are site-specific; the cost depends upon the configuration for a kilometre. For 1 km, the price starts at Rs 350.

Palm-based biometric security device

Fujitsu claims to have achieved a landmark in biometrics with its product called 'Palm Secure.' Palm Secure goes beyond the surface and authenticates users on the basis of the vein pattern in the human body. It is the latest in biometric technologies and does not require any contact with the sensor for identification and authentication. At a distance of 4-6 cm, the Palm Vein sensor reads the blue blood vein pattern under the

skin of the open palm of any individual. Since the blood veins are internal to our body, they are completely safe from any attempts to forge or duplication.

Cost: Rs 65,000 to Rs 150,000

GSM-based vehicle security solution

The Amsaki 9110 features vehicle security, vehicle tracking and keyless entry, and gives you the option to lock or unlock the car with an SMS or e-mail. This device is installed inside the vehicle under the dashboard and contains a valid SIM. Once the device has been installed, all the system controls are transferred to the user's mobile via SMS. In the case of intrusion, the vehicle can message to four mobile numbers which can be GSM or CDMA. Moreover, it calls one number. The GSM SIM which is inside the device, gets signal from the nearest tower.

Cost: Rs 8950+taxes
